## YH888 FAST SPEED NEW TYPE GLOVE MACHINE

All transmission components are equipped with an automatic oil supply device

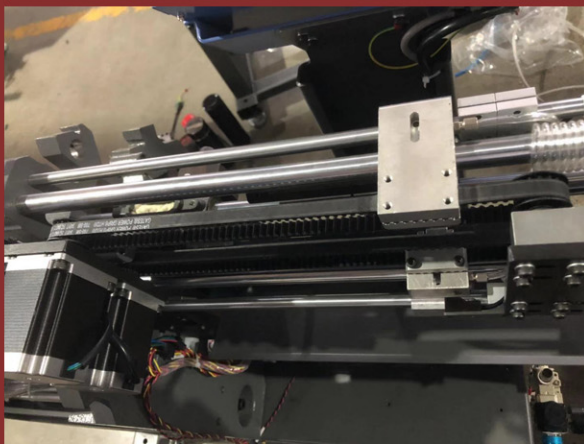

The worm gear and worm gear adopt the function of individual adjustment, so that the machine can adjust conveniently and quickly and accurately control the precision in the debugging process.

Fork and scissors drives are driven by synchronous wheels and stepping motors, and the position of the fork and scissors is more accurate

Using High Precision High Frequency Solenoid Valve to Control Pneumatic device

Scissors device, hook not in place with automatic protection device, not in place automatic alarm, upper and lower use of cylinder principle, so that the failure rate of the machine is reduced by more than 80%
