YH888 FAST SPEED NEW TYPE GLOVE MACHINE

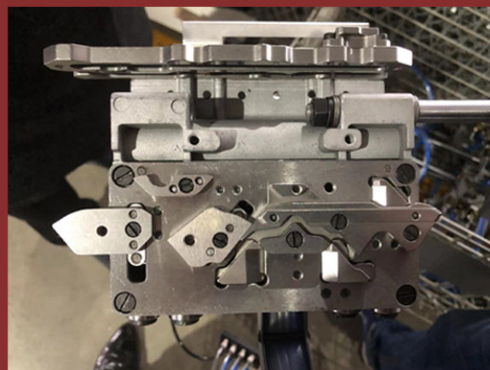

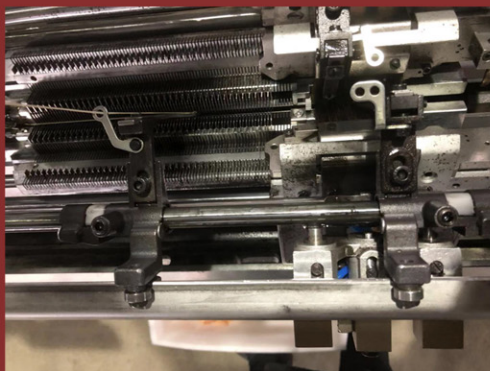

Shuttle seat warhead,
all use cylinders

The connecting parts of the head and the pedestal are adjusted by four bearings so that the machine can be easily rotated back and forth, and at the same time, the adjustment clearance with the needle plate is more reliable.

Different spindle seat structure to ensure high-speed operation no needle broken

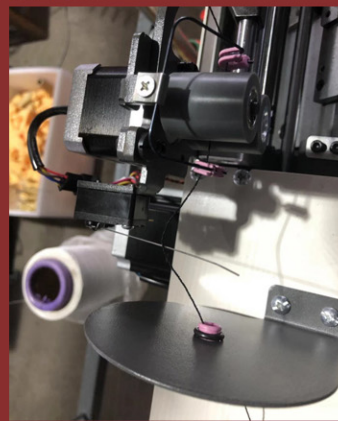

The machine head triangle is driven by pneumatic means, which makes the machine more portable and has no load on the machine's operation.

The head of the machine is connected to the pedestal without the use of pull rod and motor, which greatly lightens the load of the machine

elastic belt drive, drive with stepping motor, elastic band density is more perfect, using double break elastic band protection device
